

# VERDE-CAL<sup>®</sup>

## HORTICULTURE / GROWER

Recommended  
for all  
Horticultural  
uses!

**Enhanced Lime and Gypsum for Annuals, Perennials, Bulbs, Vines, Ornamental Grasses, Trees, Shrubs, Groundcovers, and Vegetables**

### Why **VERDE-CAL**?

- ✓ Improves hardening off of transplants.
- ✓ Improves/maximizes fertility, especially N,P,K.
- ✓ Plants in sellable condition faster.

# VERDE-CAL<sup>®</sup>

*Enhanced Calcitic Limestone with thCa<sup>™</sup>*

- 100% Available Calcium
- Extremely effective for maintaining or raising pH
- Very soluble Calcium source
- Clean, uniform particle sizes
- Can be mechanically incorporated into growing media or applied over-the-top
- Results are four times more effective than typical limestone applications
- An excellent Calcium source
- Builds extremely tough cell walls that makes plants hardier and stronger

### **thCa<sup>™</sup> Advantage**

- Organic acid used to sequester unavailable Calcium already in the soil and converts it to be available for the soil or plant to use
- Penetrates the soil profile
- Stimulates the plant growth
- Stimulates rooting
- Allows complete conditioning of the soil profile

### **Application Rates**

#### **Growing Media**

Incorporate 2 to 3 kg of **VERDE-CAL** per cubic meter of growing media. Incorporate thoroughly.

#### **Container Plants**

Incorporate 2 to 3 grams of **VERDE-CAL** per liter volume of the container every 3 months or as needed.

#### **General Turf and Landscape Beds**

Apply 2.5 kg of **VERDE-CAL** per 100 square meters every 60 days to maintain optimum nutrition and soil structure or to maintain pH. Apply 5.0 kg per 100 square meters to increase pH. Follow with soil test to determine follow up applications.

# VERDE-CAL<sup>®</sup> G

*Enhanced Gypsum with thCa<sup>™</sup>*

- 100% Available Calcium
- Will not alter soil or growing media pH
- Contains Sulfur for acid loving plants
- Very soluble Calcium Sulfate
- Clean, uniform particle sizes
- Can be mechanically incorporated into growing media or applied over-the-top
- Results are four times more effective than typical gypsum applications
- Extremely effective on leaching Sodium/salts
- An excellent Calcium source
- Builds tough cell walls that makes plant hardier and stronger

### **thCa<sup>™</sup> Advantage**

- Organic acid used to sequester unavailable Calcium already in the soil and converts it to be available for the soil or plant to use
- Penetrates the soil profile
- Stimulates the plant growth
- Stimulates rooting
- Allows complete conditioning of the soil profile

### **Application Rates**

#### **Growing Media**

Incorporate 2 to 3 kg of **VERDE-CAL G** per cubic meter of growing media. Incorporate thoroughly.

#### **Container Plants**

Incorporate 2 to 3 grams of **VERDE-CAL G** per liter volume of the container every 3 months or as needed.

#### **General Turf and Landscape Beds**

Apply 2.5 kg of **VERDE-CAL G** per 100 square meters every 60 days to maintain optimum nutrition and soil structure. Apply 5.0 kg per 100 square meters to reduce sodium and high magnesium. Follow with soil test to determine follow up applications.
